

SQL - subqueries, concat

Content

- Regular subqueries
 - ALL, ANY, IN
- Operations on result sets:
 - UNION, MINUS, INTERSECT

Example tasks

1|

Find employees with a salary equal to the company's minimum wage.

2|

Find employees with salaries equal to the lowest salaries in their corresponding departments.

3|

Find the employees with the lowest salaries in their departments.

4|

Using the ANY quantifier, select the employees earning more than the lowest salary in department 30 (i.e., more than any employee in department 30).

5|

Find the position with the highest average earnings.

6|

Using operations on the result set, find the jobs that appear in department 10 and 30 in the same time.

Individual tasks

1|

Find all employees employed in the same position as BLAKE.

2|

Using the ALL quantifier, find employees whose earnings are above the salary of any employee in department 30 (that is, greater than the highest salary in department 30).

3|

Select departments whose average earnings exceed the average earnings of department 30.

4|

Find employees whose salaries exceed the highest salaries from the SALES department.

5|

Find employees who work in the same position as employee number 7369 and whose salaries are greater than employee number 7876.

6|

List the names of the departments in which the clerks work.

7|

Using operations on the result set, list the positions that appear in department 10 and not in 30.

8|

Using operations on the result set, list all positions that appear in departments 10 and 30.

Additional tasks

1|

List the employees who work in the APOLLO XY project and at the same time also work in the ZEUS 13 project. Show information on how many years these employees have been working.

2|

Write a query that generates a list of employees and their dates of employment, with an asterisk (*) in the last-employed row. Title the column with the asterisk MAXDATE.

3|

List all the information about the longest running project. The information should be in one column named PROJECT.

4|

List the department with the least number of employees. Consider only employees who earn between 1,000 and 3,000 and whose commission is not 0.

5|

Display the minimum salary for jobs that have between 5 and 7 letters. Show only those salaries that are above 1,000.
