Content

- Group functions
 - GROUP BY, HAVING
- Aggregating functions
 - COUNT, MIN, MAX, AVG, SUM

Example tasks

1|

Calculate the average earnings in a company. The result column should be called Average Wage.

2|

Calculate the average earnings for each job in each department.

3|

Select the average earnings of departments that have more than three employees.

4|

List the lowest salaries paid to subordinates of their managers. Eliminate groups with minimum salaries less than 1,000. Arrange the results in descending order by salary size.

Individual tasks

1|

Find the minimum salary for a CLERK position.

2|

Count the employees employed in department 20.

3|

Calculate the average earnings for each of the jobs.

4|

Calculate the average earnings for each of the jobs, except for the MANAGER job.

5|

Calculate the maximum earnings for each job position.

6|

Select jobs with average earnings greater than or equal to 3,000.

7|

Find average monthly salaries and average annual earnings for each position (remember to include commissions).

8|

Find departments with more than three employees.

9|

Verify that all employee numbers are indeed different from each other.

10|

Count how many employees a department based in DALLAS has.

11|

List the maximum earnings for each salary group.

12|

Find which earnings values are recurring and how many workers receive them.

13|

Give the average earnings of workers in the second salary group

14|

Find out how many subordinates each manager has. Show name of the manager.

15|

Give the total that all workers in the first salary group earn together.

Additional tasks

1|

Show average duration of all projects. Name the resulting column as AVERAGE TIME.

2|

For each salary grade, list the highest existing earnings. Include only those employees who have worked for more than 10 years.

3|

Show average earnings for each department. Show only those departments whose average earnings are below 2,000. Include departments that have no employees.

4|

For each project, count how many employees are involved. Count only those employees who work in SALES or RESEARCH.

5|

For each boss, show the average salary of his subordinates and the number of subordinates. Sort the records by the number of subordinates and then descending by name.
